

—ENGINEERING · DESIGN · ESTIMATION

Permit-ready drawings, done right the first time.

ProArch is the engineering, design, and estimating team architects, firms, and developers rely on for complete permit sets, photorealistic 3D renders, and estimates that hold up on bid day. From ADU plans and patio plans to structural engineering and commercial cost estimation, we handle the technical work behind every project so you can focus on building it.

Serving Residential & Commercial projects nationwide.

—WHAT WE DO

One team, from concept drawings to construction budget.

01 /05

Drafting

Permit-ready floor plans, site plans, ADU plans, and patio plans for architects, contractors, and property owners. Every drafting set is built to meet local building codes and pass plan review on the first submission.

[See Drafting](#)

02 /05

Engineering

Structural and MEP engineering sets, with PE stamps provided where required.

Our licensed engineers review loads, foundations, and system design so your project holds up under permit review.

[See Engineering](#)

03 /05

Shop Drawings

Fabrication-ready shop drawings for structural, precast, millwork, and MEP components. Each set is prepared for architect and engineer approval before fabrication begins.

[See Shop Drawings](#)

04 /05

3D Design — Interior & Exterior Rendering

Photorealistic renders and walkthroughs for residential and commercial projects. See material, lighting, and layout decisions before construction starts, reducing costly changes later.

[See 3D Design](#)

05 /05

Estimation & Takeoff

Your residential and commercial estimator team, covering cost estimation and takeoff across every major trade. We deliver material takeoff and labor cost estimates with 95-97% accuracy, so your bids are built on numbers you can trust.

[Get an Estimate](#)

Residential & Commercial. One team, start to finish.

From single-family remodels to multi-unit commercial

builds, ProArch plugs into your workflow instead of replacing it — as an extended engineering team, a design partner, or a remote estimator. We work directly in your formats and timelines, so adding ProArch feels like adding staff, not hiring a vendor.

What contractors and firms say

★★★★★

"Great experience with their cost estimation and material take-off services. Accurate, timely, and really helped me plan my new home with confidence."

Mike

HOMEOWNER

★★★★★

"I've used their estimation services for a few commercial projects, and they've never let me down. Super reliable and easy to work with."

Jo Reyes

CONTRACTOR

★★★★★

"The engineering drawings I received were clear, detailed, and exactly what I needed. The team really understood my vision."

Daniel

PROPERTY DEVELOPER

★★★★★

"I've worked with a few estimators before, but this team really stood out. Clear, accurate estimates that kept my project on track."

WHO WE ARE

An extended team for firms and contractors, not a vendor.

ProArch provides engineering, design, and estimation services for architects, architecture firms, contractors, developers, and homeowners across the United States — working inside your process rather than around it.

How we work

ProArch was built around one idea: firms and contractors need reliable engineering, design, and estimating support without the overhead of hiring in-house. We plug into your existing formats, timelines, and standards — as an extended drafting team, a rendering partner, or a remote estimator you can call on for a single project or on an ongoing basis. Whether you need a full permit set, a single structural review, or an ongoing estimating relationship, our team scales to the size of the project in front of you.

What sets us apart

01

PE-Stamped Work

Structural and architectural sets delivered with professional engineering stamps where required.

02

Your Format, Not Ours

We draft to your firm's existing templates and standards when working as an extended team.

03

Fast Turnaround

Standard estimates in 24-48 hours, with 1-hour rush quotes available.

Licensed nationwide

ProArch is licensed to provide engineering and drafting services across 11 states, serving both residential and commercial projects. Licensure means every structural and architectural set we deliver can be stamped and submitted for permit in the state where your project is located.

Texas	Florida	California	Georgia	Colorado	Massachusetts	Arizona	Utah	Kentucky
North Carolina		South Carolina						

What we work on

Residential

New builds, additions, remodels, ADU plans, patio plans, decks, and pergolas for homeowners and residential contractors bidding or building single-family projects.

Commercial

Ground-up commercial projects, restaurant build-outs, and tenant improvements for developers, general contractors, and commercial estimators managing multiple bids.

Firms & Partners

Extended drafting, engineering, and shop drawing capacity for architecture and engineering firms, working inside your own drawing standards and templates.

— 01 / DRAFTING

Accurate architectural drawings, ready for permit.

Floor plans, site plans, and full drawing sets produced to your specifications — or your firm's own formats when working as an extended drafting team. Every set is prepared to meet local building codes, so your project moves through plan review without unnecessary delays.

Drafting

Engineering

Shop Drawings

3D Design

Estimation & Takeoff

What's included

Clean, accurate architectural drafting for residential and commercial projects, covering everything from initial layout to permit-ready detail.

Site Plans

Floor Plans

Elevations

Electrical Plans

Roof Plans

Project types

New Builds & Additions

Complete architectural drawing sets for ground-up construction and home additions, coordinated with your engineer and permitting office.

ADU Plans

Complete ADU plans and accessory dwelling unit drawings, from initial layout to fully permit-ready detail, sized to your lot and local zoning requirements.

Patio Plans, Decks & Pergolas

Patio plans, deck plans, and pergola drawings for smaller residential structures, drafted to the same permit-ready standard as a full home set.

Work with our drafting team

Open to working as an extended drafting team for architects, architecture, and engineering firms — using your firm's own formats and standards, at a lower cost than a full in-house drafting staff. This partnership model lets firms take on more projects without the overhead of hiring additional drafters.

Structural & MEP engineering, PE stamps provided.

Structural and MEP engineering sets that meet local code requirements — delivered with professional engineering stamps where required for permit. Our licensed engineers handle structural design, load calculations, and system detailing so your drawings hold up under plan review.

Drafting
Engineering
Shop Drawings
3D Design
Estimation & Takeoff

What's included

Engineering sets built to hold up under plan review, not just look complete — every set includes the structural calculations and detailing a plan reviewer expects to see.

Structural Engineering Sets
MEP Plans (Mechanical, Electrical, Plumbing)
Foundation Engineering
Structural Calculations & Design
Structural Review & Detailing

Where our engineering applies

New Builds & Additions

Full structural and MEP engineering for ground-up construction and additions, including load calculations and foundation design.

Remodels & ADUs

Structural review and engineering for remodels and accessory dwelling units, including any load-bearing wall or foundation changes.

Decks, Pergolas & Patio Covers

Structural engineering and PE stamps for decks, pergolas, and patio covers, sized correctly for local wind and load requirements.

Partner with our engineering team

Open to working as an extended engineering team for architecture and drafting firms — reviewing and stamping structural sets to your project's requirements, at a lower cost than a full in-house engineering staff. We can support a single structural review or serve as your ongoing engineering resource across multiple projects.

Need an engineering set stamped?

— 03 / SHOP DRAWINGS

Fabrication-ready shop drawings for contractors and suppliers.

Detailed shop drawings for structural, precast, millwork, and MEP components — built for fabrication and installation, and ready for architect/engineer submittal and approval. We work directly from approved construction documents to produce drawings your shop and field crews can build from.

Drafting

Engineering

Shop Drawings

3D Design

Estimation & Takeoff

What's included

Shop drawings translate design and engineering documents into precise fabrication and installation detail, so nothing is left to interpretation on the shop floor or in the field.

Structural Steel Shop Drawings

Precast Concrete Shop Drawings

Millwork & Casework Shop Drawings

MEP Coordination Drawings

Rebar & Reinforcement Drawings

How it fits your project

Submittal-Ready

Drawings prepared for architect and engineer review, redline, and approval before fabrication begins, minimizing costly rework later.

Fabricators & Subcontractors

Detailed enough for shop and field crews to build and install directly from the drawing set, with dimensions and connections clearly called out.

Commercial & Residential

Shop drawing support for commercial builds, tenant improvements, and detailed residential projects requiring custom fabrication.

Work with our shop drawing team

Open to working as an extended shop drawing team for general contractors, fabricators, and subcontractors — producing submittal-ready drawings to your project's exact specifications and formats. We can turn around a single trade package or support shop drawings across an entire project.

— 04 / 3D DESIGN

See the finished space before construction begins.

Photorealistic interior and exterior rendering and walkthroughs for residential, restaurant, and commercial projects — so clients and investors can visualize the result with confidence. Renders are built directly from your drafted or engineered plans, so what you see is what gets built.

Drafting

Engineering

Shop Drawings

3D Design

Estimation & Takeoff

Interior Rendering

Photorealistic interior visuals covering layout, materials, and lighting — ideal for client presentations, marketing, and confirming design decisions before a build begins.

Exterior Rendering

Full exterior renders showing massing, materials, and landscaping in context, for homes, restaurants, and commercial buildings — useful for permitting visuals as well as marketing.

What's included

Interior Rendering

Exterior Rendering

Walkthrough Animations

Material & Lighting Studies

Where it's used

Residential

Help homeowners visualize a remodel, addition, or new build before construction starts, reducing change orders down the line.

Restaurants

Interior and exterior renders for concept approval, franchise presentations, and investor decks before build-out begins.

Commercial

Renders that support permitting visuals, leasing packages, and investment or financing decisions.

—05 / ESTIMATION & TAKEOFF

Never miss a bid deadline again.

Your residential estimator and commercial estimator team for cost estimation and material takeoff, so a tight deadline never costs you a project. Standard estimates in 24-48 hours, with rush quotes available in as little as one hour, backed by a continuously updated pricing database for accuracy you can bid with confidence.

12+

How our estimating process works

A straightforward process built for contractors on a bid deadline — from plans in, to a bid-ready estimate out.

01

Send us your plans

Upload architectural or structural drawings, along with your bid deadline and scope of work.

02

We complete the takeoff

Our estimators perform a detailed material takeoff and price it against current, trade-specific cost data.

03

Receive your estimate

You get a bid-ready cost estimate within 24–48 hours, or in as little as one hour for rush requests.

Trades covered

As your dedicated takeoff professional, we deliver accurate cost estimation, material takeoff, labor costs, and budget forecasting across every major trade — so your bid accounts for the full scope of the job, not just the obvious line items.

Framing	Roofing	Concrete	Plumbing	Electrical	Drywall	Painting	Flooring	HVAC	Masonry	Paving
Metal	& More									

Residential Estimator

Cost estimation and takeoff for single-family homes, remodels, ADU plans, patio plans, and other residential projects — sized to the scope of a homeowner or residential contractor's bid. We account for local material and labor costs so your estimate reflects what the job will actually cost to build, not a generic average.

Commercial Estimator

Takeoff and cost estimation for commercial builds, tenant improvements, and multi-unit projects, delivered on a bid-ready timeline. Our commercial estimating covers structural, MEP, and finish trades, so general contractors can submit a complete, defensible bid.

Work with us as your estimating team

Rather than a one-off estimate, ProArch can work as your ongoing remote estimating partner — so you're never forced to pass on a bid because of time or capacity. Contractors who bid continuously with us qualify for a discounted rate, keeping estimating costs predictable across every project. This lets you bid on more work without adding an in-house estimator to payroll.
